

AMENDMENT NO. 5

ESCALATED PUBLIC CONSEQUENCES

To the Public Accountability Agreement executed July 20, 2026

Participant: Micheal Ray Berry

Prepared: August 1, 2026, pursuant to Accountability Partner directive

Effective date: Upon execution by both parties

Governing principle: Escalated consequences are assigned by the automated system, reviewed and approved by the Accountability Partner, performed publicly where specified below, and verified through the automated system subject to Accountability Partner review and override.

This Amendment modifies the Public Accountability Agreement and its prior amendments only to the extent expressly stated below.

1 • Public Corner Time Reinstated

1.1 Public consequence

Corner time is reinstated as an escalated public consequence. Its required duration is determined by the assigned Consequence Level:

- **Level One:** 15 continuous minutes
- **Level Two:** 20 continuous minutes
- **Level Three:** 30 continuous minutes

1.2 Performance standard

Public corner time must be performed:

1. Standing and facing a plain corner;
2. Wearing the Penalty Uniform established in §2;
3. In one continuous, unedited recording;
4. Through the official Recording Assistant;
5. With the session date, violation number, assigned level, required duration, and unique challenge code visibly burned into the recording; and
6. With the Participant's full body and the relevant corner continuously visible in the frame.

Ordinary posture adjustments necessary for safety are permitted. Leaving the recording area, materially obstructing the camera, stopping the recording, editing the footage, substituting prerecorded footage, or failing to satisfy the required duration causes the automated system to return the submission for correction. A technical or verification failure is not itself a new violation unless the Participant knowingly caused, concealed, or refused to correct it.

1.3 Publication

Upon successful verification, the complete corner-time recording must be published in full and without material editing. It must appear:

1. On the permanent daily record page for the date of performance;
2. On or directly linked from the applicable violation entry; and
3. On or directly linked from the permanent Penalty Log entry.

The public verification line must state substantially:

CORNER TIME COMPLETED — [15 / 20 / 30] MINUTES — VERIFIED

A resolved status does not remove, unlist, shorten, replace, or break the official links to the published recording, except as permitted under §5.5.

1.4 Public acknowledgment

A separate public acknowledgment video must identify:

- The Participant by name;
- The applicable violation number;
- The requirement missed or breached;
- The date and deadline involved;
- The assigned Consequence Level;
- The public consequence required; and
- The steps required for resolution.

The acknowledgment must be recorded in the Penalty Uniform during the same Recording Assistant session as corner time. The acknowledgment and corner time use one challenge code but must be saved and published as two separate files.

1.5 Relationship to private corrective sessions

Public corner time and the private corrective sessions established by Amendment No. 4 are distinct components unless the consequence matrix or Accountability Partner expressly designates one as a substitute for the other.

Private corrective-session footage remains private. Its public record is limited to the applicable factual verification line, duration, date, and completion status.

2 • Penalty Uniform

2.1 Designation

A plain pink unitard worn with plain black shoes and without a name tag is designated as the **Penalty Uniform**.

The Penalty Uniform must remain fully opaque, nontransparent, nonsexualized, and suitable for an SFW public website.

2.2 Required period

The Penalty Uniform period begins when the Accountability Partner approves the automated assignment. It continues through the calendar day on which the overall consequence status becomes **Satisfied**.

During that period, the Penalty Uniform replaces the standard black uniform for every applicable visual requirement, including:

- Official weigh-ins;
- Daily inspection videos;
- Daily photographs;
- Public acknowledgment videos; and
- Public corner time.

If approval occurs after a required daily recording has already been properly completed, the Penalty Uniform requirement begins with the next required visual submission. It does not retroactively invalidate an otherwise compliant submission.

2.3 Public marker

The Penalty Uniform serves as the visual public marker of an open escalated consequence. Its appearance does not require additional commentary on routine daily photographs or videos beyond the factual information required elsewhere by the Agreement.

The violation entry, acknowledgment video, and Penalty Log may still explain the applicable violation and consequence.

2.4 Return to standard uniform

After the overall status becomes **Satisfied**, the standard black uniform resumes with the next calendar day's requirements. The Penalty Uniform may not be required after satisfaction unless another approved escalated consequence remains open.

3 • Assignment, Approval, and Verification

3.1 Automated assignment

When a violation is declared, the automated system generates a proposed consequence from the then-current consequence matrix. The proposal must identify:

- Violation number;
- Consequence Level;
- Required components;
- Required duration;

- Applicable deadlines; and
- Proposed Penalty Uniform period.

An automated proposal is not owed, performed, or published as an approved consequence until reviewed by the Accountability Partner.

3.2 Accountability Partner decision

The Accountability Partner may:

- Approve the proposed assignment;
- Reduce its level or duration;
- Substitute the private structure established by Amendment No. 4;
- Return the assignment for correction; or
- Waive the escalated consequence.

The decision, date, and resulting status must be recorded permanently. The public record need not disclose private deliberations or excluded personal information.

3.3 Delivery and publication of assignment

Upon approval:

1. The approved assignment is delivered to the Participant;
2. The Penalty Uniform period begins as provided in §2.2;
3. The assignment and its status appear on the violation entry and Penalty Log; and
4. The applicable completion deadline begins.

3.4 Automated verification

The automated system evaluates, at minimum:

- Challenge-code validity;
- Recording continuity;
- Required duration;
- Penalty Uniform compliance;
- Camera framing; and
- File integrity.

A passing result publishes the approved footage and updates the applicable component to **Verified**.

A failing result must identify the detected defect and permit a corrected submission. A failed technical check does not automatically increase the Consequence Level or create another violation.

3.5 Human review and appeal

The Participant may request Accountability Partner review of an automated failure caused by a reasonable technical, accessibility, medical, or verification issue. The Accountability Partner may approve the evidence manually, require correction, substitute a safe equivalent, or suspend the requirement under §5.

3.6 Override authority

The Accountability Partner retains authority to override any automated assignment or verification result. Each override must identify:

- The decision made;
- The date of the decision;
- The general reason; and
- The resulting status.

Override entries are permanent. Medical details, security information, and other excluded personal information remain private.

4 • Public Record and Permanent Penalty Log

4.1 Required violation entry

Each approved escalated consequence adds the following to the applicable public violation entry:

- Violation number and declaration date;
- Requirement missed or breached;
- Assigned consequence and Consequence Level;
- Accountability Partner decision;
- Full public acknowledgment video;
- Full, continuous public corner-time recording;
- Standardized violation portrait;
- Verification status for every component;
- Penalty Uniform start and end dates; and
- Overall status.

4.2 Status terminology

Component statuses are:

Assigned • Approved • Performed • Verified • Overdue • Waived • Replaced

The overall consequence status is:

Open • Satisfied

A consequence becomes **Satisfied** only when every nonwaived required component has been completed and verified or otherwise closed by the Accountability Partner.

4.3 Active display

While the violation remains Open:

- The standardized violation portrait may appear prominently throughout the site;
- The homepage may display an active violation takeover;
- The acknowledgment and consequence status may be featured prominently; and
- The Penalty Uniform remains required under §2.

4.4 Resolution

When the consequence becomes Satisfied:

- The active homepage takeover ends;
- The standardized violation portrait is removed from active sitewide display;
- The standard black uniform resumes as provided in §2.4; and
- The violation and consequence are marked **Satisfied**, not deleted.

Resolution documents completion. It does not erase the underlying violation.

4.5 Permanent Penalty Log

The Penalty Log is the permanent public index of every approved escalated consequence. Each entry must display or directly link to:

1. The permanent violation entry;
2. The full public acknowledgment video;
3. The full, continuous corner-time recording;
4. The automated or Accountability Partner verification record;
5. The assigned level and duration;
6. The Penalty Uniform period; and
7. The final status.

Satisfaction does not delete, conceal, unlist, shorten, replace, or intentionally break these official links. The complete acknowledgment and corner-time recording remain linked in full from the Penalty Log as part of the official public record, subject only to §5.5.

4.6 Factual presentation

The permanent archive may use direct and unambiguous language describing the violation, assignment, performance, and resolution. It may not include:

- Sexualized material or presentation;
- Nudity or transparent clothing;
- Employer targeting;

- Direct distribution to the Participant's employer, coworkers, relatives, or other identified third parties;
- Calls for ridicule, harassment, threats, or outside punishment;
- Private financial amounts or payment information; or
- Medical, security, contact, or other excluded personal information.

The project may make the official record publicly accessible and indexable, but it may not use paid advertising or targeted outreach to force the material upon particular people.

4.7 Financial components

Financial consequences, if applicable, continue to appear publicly only by status, as permitted by §8 and Amendment No. 4:

Assessed · Pending · Paid · Overdue · Waived

Dollar amounts, account information, payment instruments, receipts, and transaction details remain private.

5 · Safety, Consent, and Preserved Boundaries

5.1 Prohibited practices

Nothing in this Amendment authorizes:

- Restraints;
- Locked confinement;
- Corporal punishment;
- Nudity or sexualized exposure;
- Food, water, sleep, medication, restroom, or medical deprivation;
- Stress positions beyond ordinary standing;
- Performance through pain, dizziness, illness, or injury;
- Threats against employment, housing, finances, relationships, or physical safety; or
- Disclosure of excluded personal information.

5.2 Immediate safety stop

The Participant may stop a session immediately for pain, dizziness, shortness of breath, weakness, loss of balance, equipment danger, or another reasonable safety concern.

A good-faith safety stop is not an additional violation. The session remains incomplete pending Accountability Partner review, medical clearance where appropriate, or assignment of a safe substitute.

5.3 Medical and safety review

The medical and safety review process established by §9 remains available at all times. A properly invoked review suspends the disputed performance requirement until the Accountability Partner completes the review.

5.4 Consent and exit

Participation remains voluntary. Consent may be withdrawn prospectively, and the Agreement's established exit process may not be disabled, automated away, or conditioned on completing a humiliating performance.

Withdrawal stops new recording and publication obligations. It does not guarantee recovery of material already copied, cached, archived, indexed, downloaded, or redistributed by independent third parties.

5.5 Project-controlled media

While the Agreement remains active, verified acknowledgment and corner-time recordings remain permanently linked in full from the project-controlled Penalty Log.

If the Participant formally withdraws consent and completes the Agreement's exit process, future publication stops. The permanent factual entries, dates, statuses, and verification results may remain, but project-controlled video files and direct playback links must be removed upon a written removal request confirmed by the Accountability Partner.

Nothing in this Amendment promises that third-party copies, search caches, archives, downloads, or reposts can be recovered or erased.

5.6 Permanent-abandonment determination

The permanent-abandonment process established by §11 remains a manual Accountability Partner decision. The automated system may flag apparent abandonment but may not make the final determination.

6 • Effect on Prior Terms

6.1 Superseded provisions

This Amendment supersedes prior terms only to the extent necessary to:

1. Reinstate public corner time;
2. Establish the Penalty Uniform;
3. Permit publication of full corner-time recordings and acknowledgment videos;
4. Require permanent Penalty Log entries with full media links while the Agreement remains active;
5. Modify §8's privacy scope as applied to public corner time and the Penalty Uniform marker; and
6. Supersede Amendment No. 4 §4 only insofar as that provision prohibited this specifically defined public-consequence structure.

6.2 Terms remaining in force

All terms not expressly modified remain in force, including:

- Unified Consequence Levels;

- Private corrective-session requirements;
- Milestone resets;
- §7;
- §9 medical and safety review;
- §11 termination and permanent-abandonment procedure;
- §12.1 amendment requirements; and
- Existing privacy protections for financial, medical, contact, employment, security, and other excluded personal information.

6.3 Conflict rule

If this Amendment conflicts with an earlier provision, this Amendment controls only as to the subject expressly addressed. All remaining provisions must be interpreted consistently with the Agreement as a whole.

6.4 Public-risk acknowledgment

The Participant and Accountability Partner acknowledge that the materials authorized by this Amendment:

- Bear the Participant's legal name and likeness;
- Are intentionally public and may be indexed by search engines;
- May be viewed by relatives, coworkers, acquaintances, or strangers without targeted distribution by the project;
- May be copied or redistributed by third parties outside project control; and
- May remain accessible through caches, archives, downloads, or reposts even after project-controlled removal.

The parties acknowledge that permanent factual retention and permanent public video distribution create different risks. They adopt the structure above knowingly, including the limited removal mechanism in §5.5.

7 • Execution

By signing below, the parties confirm that they have reviewed this Amendment, understand its public-record and publication provisions, and voluntarily incorporate it into the Public Accountability Agreement.
